Career Objective

This CV highlights my background as a learner in **Database Management and SQL-based Data Analysis**. It presents my education, projects, and technical skills related to **MySQL, data querying, and database operations**. My goal is to apply my SQL knowledge to manage and analyze data efficiently and grow as a **Database Engineer** in a professional environment.

Quick Guide

- Passionate about **Database Management, SQL Querying, and Data Analysis**. .
- Strong understanding of **MySQL fundamentals including SELECT, JOIN, GROUP BY, and subqueries**. .
- Experience working with **large datasets for data retrieval and analysis**.
- Familiar with **query optimization, indexing basics, and database performance improvement**. .
- Skilled in **data verification, cleaning, and generating reports using SQL queries**.

Education

Daffodil International University , BS.c in Information Technology June 2024 – Present

- GPA: 3.2/4.0
- **Coursework:** Database Management System, Website Application Development, Object-Oriented Programming

Projects

E-Commerce Sales Analysis github.com/ecommerceanalysis

- Designed and implemented an e-commerce relational database using MySQL. .
- Wrote complex SQL queries using SELECT, JOIN, GROUP BY, and aggregations to analyze sales data. .
- Generated business insights such as top-selling products, customer revenue, and monthly sales trends .
- Tools Used: MySQL, SQL

Customer Churn Analysis [github.com/Customer Churn](https://github.com/CustomerChurn)

- Built a SQL-based customer churn analysis system to identify high-risk customers.
- Analyzed subscription status, payment failures, and support ticket activity to detect churn patterns.
- Used complex SQL queries with JOIN, GROUP BY, HAVING, and subqueries for customer behavior analysis .
- Tools Used: MySQL, SQL

Retail Sales Data Analysis [github.com/Retail Analysis](https://github.com/RetailAnalysis)

- Developed a retail sales analysis database to analyze store performance and product sales. .
- Implemented SQL queries to generate reports such as store revenue, category sales, and monthly trends.
- Used complex JOIN operations and aggregation functions for business reporting.
- Tools Used: MySQL, SQL

Certifications

Ostad - Data Science And Machine Learning with Python <https://dub.sh/swXDE9F>

Technologies

Languages: Programming Python, C, Data Analysis & Machine Learning, Pandas, NumPy, Scikit-Learn, HTML, CSS

Technologies: Database, Microsoft SQL Server, VS Code, Jupyter Notebook
